

OVUOBA CHIAGOZIE

SOFTWARE ENGINEER

SUMMARY

Software Engineer with 4+ years of experience building production systems across React/Next.js frontends and Node.js/NestJS/PHP backends. Specializes in payment integrations, cloud-based rendering pipelines, and scalable API architecture, with hands-on experience across fintech, streaming, and SaaS products.

TECHNOLOGIES

- Frontend: Javascript, Typescript, React, Vue, Nextjs, TailwindCSS, Bootstrap
- Backend: Python, PHP/Laravel, Node.js, Nest.js, Express, Deno
- Technologies: AWS, MYSQL, PostgreSQL, Prisma ORM, MongoDB, Supabase, Docker, Redis, Jest

WORK EXPERIENCE

Meezak Technologies

JANUARY 2026 - PRESENT

Software Engineer(Software agency)

- Built and maintained backend services across client products (FloFinance, GetAPro, Twinova, MyStore, Pyramid Global).
- Integrated Paystack, Flutterwave, and Monnify payments, including webhook handling for transaction verification.
- Contributed to a custom in-house PHP framework standardizing backend architecture across projects.

Rendria

APRIL 2025 - JANUARY 2026

Software Engineer

- Built a React drag-and-drop canvas editor with Canva-style snapping, QR/barcode elements, and a unified text/image/shape component model.
- Built a server-side rendering pipeline on AWS Lambda (headless Chromium) for pixel-perfect PNG/JPEG/WebP exports, uploaded to Cloudinary.
- Architected the render API with request validation, API-key auth, and usage/credits tracking for rate control and billing.
- Cut latency and cost by offloading browser rendering to Lambda and adding warm-up strategies and client-side thumbnail capture.

MO Group Limited

DECEMBER 2024 - JANUARY 2025

Software Engineer(Nollywood streaming platform)

- Implemented CloudFront signed URLs to protect video assets from scraping and unauthorized access.
- Built API endpoints, guards, and decorators for auth, access control, and secure streaming with NestJS and Prisma.
- Improved video retrieval and streaming performance, reducing load times and improving playback stability.

Get Assigned

AUGUST 2023 - JULY 2024

Software Engineer(Assignment management platform)

- Took product from a 5-year dev cycle to shipping 1-2 key features monthly.
- Added a promo discount system to subscriptions, driving a signup increase.
- Fixed a broken CI/CD pipeline, enabling devs to ship to production without DevOps help.
- Rebuilt most of the UI to match the original design system.

TagU Async

APRIL 2022 - AUGUST 2023

Full-stack Engineer(Team collaboration software)

- Integrated the notification feature that notifies team members when a user has viewed or responded to their web sticky note.
- Built out several backend Api endpoints for the information or features in the frontend of the main website
- Incorporated a blogs page for the main website. Worked on the full backend and frontend cycle.
